

PJ for paper roll

- ***Portable tester for PJ tests on paper, roll paper and cardboard in accordance with P.J. procedure***
- ***Ball indenter included***
- ***Easy and immediate measurement with digital display***
- ***Can be utilised directly on paper roll due to the self aligning foot or on flat surfaces***

#### Technical characteristics

The hardness tester is composed of:

- Structure with open metal base to access the test sample, column to support the probe which is adjustable in height to accept samples of different sizes;
- Electric probe with digital read-out, resolution 0.01 mm., provided with printer connector.
- The base has adjustable feet and optical level for the levelling of the instrument; to test cylinders of different diameter especially gummed rolls.
- Handle to transport the instrument to execute tests of hardness directly on large pieces such as gummed rolls.
